

Eugene Lerman

Senior Software Engineer

Ramat Gan, Israel · (+972) 52-3535-231 · lerman.gene@gmail.com · github.com/airbugg · linkedin.com/in/lerman-gene

Senior Software Engineer with 12+ years in client infrastructure, frontend architecture and mobile development. Led CI/CD migrations, a localization platform, a React Native migration and AI-assisted development workflows for products serving millions of users.

PROFESSIONAL EXPERIENCE

Rylo AI communication platform for the Deaf and hard-of-hearing Feb 2026 – Present
Software Engineer Tel Aviv

- One of five engineers on a ground-up rewrite of the company client apps (native iOS/Swift, Android/Kotlin, React Native), shipped in three months using spec-driven, multi-agent AI development workflows.
- Built the client platform for the rewrite from scratch: the apps monorepo, a design system with automated Figma sync, and all client CI/CD.
- Rebuilt the mobile release process: an automated pipeline with a web UI for cutting release branches and shipping builds, and an in-house app-distribution service that replaced Firebase App Distribution.

Remitly Israel (formerly Rewire) cross-border banking & remittances Dec 2022 – Feb 2026
Staff Software Engineer · Client Infrastructure Tel Aviv

- Lead engineer of the Client Infrastructure team: technical planning and cross-team initiatives across roughly ten teams and three products (~10M monthly users).
- Designed and implemented a localization automation platform (i18next): dynamic translation delivery, version-scoped production hotfixes, and CI-driven string extraction and translator handoff.
- Migrated tens of thousands of UI strings to semantic keys with an LLM service I built: model-suggested names, human approval in a small review UI, changes applied as auto-generated PRs. The code changes themselves took hours.
- Moved all client CI/CD from GitLab to GitHub Actions, cutting pipeline runtimes roughly in half. The cutover took one weekend; teams started Monday on the new system with nothing missing.

Remitly Israel (formerly Rewire) Jun 2020 – Dec 2022
Senior Software Engineer Tel Aviv

- Led the migration of the core product from an AngularJS/React web app to React Native, the company's first mobile-first architecture.
- Designed an XState orchestration engine for financial flows (send money, deposit, re-authentication) with over-the-air business-logic updates: changes reached users without an app release or store review.

Wix.com Feb 2017 – Nov 2019
Software Engineer Be'er Sheva / Tel Aviv

- Tech lead on Wix Forms, the first first-party app built on the Editor platform SDK; its architecture became the reference for the first-party apps that followed.
- Extracted the Editor's user authentication out of the monolith into a standalone module, code that runs under every editor-built site. Still one of my proudest projects.

EDUCATION

BSc, Computer Science & Bioinformatics Ben-Gurion University of the Negev 2013 – 2017

PUBLICATIONS

TissueNet2: A quantitative view of proteins and their interactions across human tissues Nucleic Acids Research
2016

Basha O, Barshir R, Sharon M, Lerman E, Kirson B, Hekselman I and Yeger-Lotem E

SKILLS

Languages	TypeScript, JavaScript, Python, Swift, Kotlin, Objective-C, SQL, Bash
Frontend	React, React Native, Expo, EAS, Nitro Modules, XState, Apollo GraphQL, Redux, MobX, Tailwind CSS, Reanimated, Svelte, Angular, i18next
Backend & Infrastructure	Node.js, Bun, GitHub Actions, GitLab CI, Jenkins, Terraform, Pulumi, AWS, Kubernetes, Helm, Docker
AI Tooling	Claude Code, Codex, Cursor, multi-agent workflows, MCP, agent skill authoring, spec-driven development
Spoken Languages	English (fluent), Hebrew (fluent), Russian (conversational)
