

{ EUGENE : LERMAN }

SENIOR SOFTWARE ENGINEER

Ramat Gan, Israel · (+972) 52-3535-231 · lerman.gene@gmail.com · github.com/airbugg · linkedin.com/in/lerman-gene

A curious individual and a voracious reader with a somewhat philosophical approach to life. Twelve years of building clients and the infrastructure underneath them, at Wix, Remitly and now an early-stage startup.

{ EXPERIENCE }

Rylo AI communication platform for the Deaf and hard-of-hearing

Feb 2026 – Present

SOFTWARE ENGINEER

Tel Aviv

- One of five engineers on a ground-up rewrite of the company's client apps: native iOS (`Swift`), Android (`Kotlin`) and `React Native` . Shipped in three months, working spec-first with coding agents handling much of the implementation and review in parallel.
- Built the client platform for the rewrite from scratch: the apps monorepo, a design system with automated `Figma` sync, and all client CI/CD.
- Rebuilt the mobile release process: an automated pipeline with a web UI for cutting release branches and shipping builds, and an in-house app-distribution service that replaced `Firebase App Distribution` .

Remitly Israel (formerly Rewire) cross-border banking & remittances *Tel Aviv*

Jun 2020 – Feb 2026

STAFF SOFTWARE ENGINEER · CLIENT INFRASTRUCTURE

Dec 2022 – Feb 2026

- Lead engineer of the Client Infrastructure team: technical planning and cross-team initiatives across roughly ten teams and three products (~10M monthly users).
- Designed the localization platform: translations fetched dynamically, with hotfixes scoped to specific app versions in production (previously a translation fix required a full release), and a CI pipeline that extracts changed strings from each PR and files translator tasks automatically. Translations stopped blocking merges.
- Migrated tens of thousands of UI strings to semantic keys with an LLM service I built: model-suggested names, human approval in a small review UI, changes applied as auto-generated PRs. The code changes themselves took hours.

SENIOR SOFTWARE ENGINEER

Jun 2020 – Dec 2022

- Led the migration of the core product from an `AngularJS` / `React` web app to `React Native` , the company's first mobile-first architecture.
- Designed an `XState` orchestration engine for financial flows (send money, deposit, re-authentication) with over-the-air business-logic updates: changes reached users without an app release or store review.
- Moved all client CI/CD from `GitLab` to `GitHub Actions` , cutting pipeline runtimes roughly in half. The cutover took one weekend; teams started Monday on the new system with nothing missing.

Wix.com

Feb 2017 – Nov 2019

SOFTWARE ENGINEER

Be'er Sheva / Tel Aviv

- Tech lead on Wix Forms, the first first-party app built on the Editor platform SDK; its architecture became the reference for the first-party apps that followed.
- Extracted the Editor's user authentication out of the monolith into a standalone module, code that runs under every editor-built site. Still one of my proudest projects.

Yeger-Lotem Lab, Ben-Gurion University

Feb 2015 – Feb 2017

FULL-STACK DEVELOPER (PART-TIME)

Be'er Sheva

- Sole engineer for the lab's software: interactive visualization tools for protein-interaction networks (`D3` , `Cytoscape.js`) over `Python` / `Flask` / `CeLery` APIs.

{ EDUCATION }

BSc, Computer Science & Bioinformatics Ben-Gurion University of the Negev

2013 – 2017

TissueNet2: A quantitative view of proteins and their interactions across human tissues

Nucleic Acids Research
