

# { EUGENE : LERMAN }

## Senior Software Engineer

Ramat Gan, Israel · (+972) 52-3535-231 · lerman.gene@gmail.com · github.com/airbugg · linkedin.com/in/lerman-gene

Software engineer, twelve years. I have owned client infrastructure, native and React Native apps, release engineering and the occasional gnarly product flow. I like small teams and large ownership.

## { EXPERIENCE }

**Rylo** AI communication platform for the Deaf and hard-of-hearing  
**SOFTWARE ENGINEER**

Feb 2026 – Present  
Tel Aviv

- One of five engineers on a ground-up rewrite of the company's client apps: native iOS ( `Swift` ), Android ( `Kotlin` ) and `React Native` . Shipped in three months, working spec-first with coding agents handling much of the implementation and review in parallel.
- Owned onboarding in the rebuilt app, its most complex flow; modeled it as an explicit `XState` state machine to keep every branch testable.
- Built the client platform for the rewrite from scratch: the apps monorepo, a design system with automated `Figma` sync, and all client CI/CD.
- Rebuilt the mobile release process: an automated pipeline with a web UI for cutting release branches and shipping builds, and an in-house app-distribution service that replaced `Firebase App Distribution` .

**Remitly Israel (formerly Rewire)** cross-border banking & remittances **Tel Aviv**  
**STAFF SOFTWARE ENGINEER · CLIENT INFRASTRUCTURE**

Jun 2020 – Feb 2026  
Dec 2022 – Feb 2026

- Lead engineer of the Client Infrastructure team: technical planning and cross-team initiatives across roughly ten teams and three products (~10M monthly users).
- Designed the localization platform: translations fetched dynamically, with hotfixes scoped to specific app versions in production (previously a translation fix required a full release), and a CI pipeline that extracts changed strings from each PR and files translator tasks automatically. Translations stopped blocking merges.
- Migrated tens of thousands of UI strings to semantic keys with an LLM service I built: model-suggested names, human approval in a small review UI, changes applied as auto-generated PRs. The code changes themselves took hours.

**SENIOR SOFTWARE ENGINEER**

Jun 2020 – Dec 2022

- Led the migration of the core product from an `AngularJS / React` web app to `React Native` , the company's first mobile-first architecture.
- Designed an `XState` orchestration engine for financial flows (send money, deposit, re-authentication) with over-the-air business-logic updates: changes reached users without an app release or store review.
- Moved all client CI/CD from `GitLab` to `GitHub Actions` , cutting pipeline runtimes roughly in half. The cutover took one weekend; teams started Monday on the new system with nothing missing.

**Wix.com**  
**SOFTWARE ENGINEER**

Feb 2017 – Nov 2019  
Be'er Sheva / Tel Aviv

- Tech lead on Wix Forms, the first first-party app built on the Editor platform SDK; its architecture became the reference for the first-party apps that followed.
- Extracted the Editor's user authentication out of the monolith into a standalone module, code that runs under every editor-built site. Still one of my proudest projects.

## { EDUCATION }

**BSc, Computer Science & Bioinformatics** Ben-Gurion University of the Negev

2013 – 2017

**TissueNet2: A quantitative view of proteins and their interactions across human tissues**

*Nucleic Acids Research*  
2016

BASHA O, BARSHIR R, SHARON M, LERMAN E, KIRSON B, HEKSELMAN I AND YEGER-LOTEM E

## { SKILLS }

Core [TypeScript, React Native, Node, client CI/CD]

Native [Swift, Kotlin, Objective-C]

AI tooling [Claude Code, Codex, Cursor]

Languages [English, Hebrew, Russian (conversational)]
