

{ EUGENE : LERMAN }

SENIOR SOFTWARE ENGINEER

Ramat Gan, Israel · (+972) 52-3535-231 · lerman.gene@gmail.com · github.com/airbugg · linkedin.com/in/lerman-gene

Since early 2026 most of my code has shipped through coding agents: spec-first, implementation and review running in parallel. Underneath that, twelve years of TypeScript, React Native and client infrastructure.

{ HOW I WORK }

Spec- and prototype-driven, multi-agent: Ralph-style loops, custom skills for repetitive work (simulator testing included), agents for implementation, review and validation. I went through the everything-is-a-skill phase, hit context bloat, and came back to a lean setup: a few focused skills, progressively disclosed, code as the source of truth. Harnesses in rotation: Claude Code, Codex, Cursor, OpenClaw, Hermes, Argent.

{ EXPERIENCE }

Rylo AI communication platform for the Deaf and hard-of-hearing Feb 2026 – Present
SOFTWARE ENGINEER Tel Aviv

- One of five engineers on a ground-up rewrite of the company's client apps: native iOS (`Swift`), Android (`Kotlin`) and `React Native` . Shipped in three months, working spec-first with coding agents handling much of the implementation and review in parallel.
- Restructured the team's shared coding-agent setup after measuring ~70k tokens of always-loaded context per session. Replaced it with small, focused skills loaded on demand, with code as the source of truth.
- Rebuilt the mobile release process: an automated pipeline with a web UI for cutting release branches and shipping builds, and an in-house app-distribution service that replaced `Firebase App Distribution` .

Remitly Israel (formerly Rewire) cross-border banking & remittances Dec 2022 – Feb 2026
STAFF SOFTWARE ENGINEER · CLIENT INFRASTRUCTURE Tel Aviv

- Lead engineer of the Client Infrastructure team: technical planning and cross-team initiatives across roughly ten teams and three products (~10M monthly users).
- Migrated tens of thousands of UI strings to semantic keys with an LLM service I built: model-suggested names, human approval in a small review UI, changes applied as auto-generated PRs. The code changes themselves took hours.

Remitly Israel (formerly Rewire) Jun 2020 – Dec 2022
SENIOR SOFTWARE ENGINEER Tel Aviv

- Led the migration of the core product from an `AngularJS` / `React` web app to `React Native` , the company's first mobile-first architecture.
- Designed an `XState` orchestration engine for financial flows (send money, deposit, re-authentication) with over-the-air business-logic updates: changes reached users without an app release or store review.
- Moved all client CI/CD from `GitLab` to `GitHub Actions` , cutting pipeline runtimes roughly in half. The cutover took one weekend; teams started Monday on the new system with nothing missing.

Wix.com Feb 2017 – Nov 2019
SOFTWARE ENGINEER Be'er Sheva / Tel Aviv

- Tech lead on Wix Forms, the first first-party app built on the Editor platform SDK; its architecture became the reference for the first-party apps that followed.

{ EDUCATION }

BSc, Computer Science & Bioinformatics Ben-Gurion University of the Negev 2013 – 2017
