

# { EUGENE : LERMAN }

Senior Software Engineer

Ramat Gan, Israel · (+972) 52-3535-231 · lerman.gene@gmail.com · github.com/airbugg · linkedin.com/in/lerman-gene

A curious individual and a voracious reader with a somewhat philosophical approach to life. Twelve years of building clients and the infrastructure underneath them, at Wix, Remitly and now an early-stage startup.

## { EXPERIENCE }

**Rylo** AI communication platform for the Deaf and hard-of-hearing

Feb 2026 – Present

SOFTWARE ENGINEER

Tel Aviv

- One of five engineers on a ground-up rewrite of the company's client apps: native iOS ( Swift ), Android ( Kotlin ) and React Native . Shipped in three months, working spec-first with coding agents handling much of the implementation and review in parallel.
- Built the client platform for the rewrite from scratch: the apps monorepo, a design system with automated Figma sync, and all client CI/CD.
- Rebuilt the mobile release process: an automated pipeline with a web UI for cutting release branches and shipping builds, and an in-house app-distribution service that replaced Firebase App Distribution .

**Remitly Israel (formerly Rewire)** cross-border banking & remittances

Dec 2022 – Feb 2026

STAFF SOFTWARE ENGINEER · CLIENT INFRASTRUCTURE

Tel Aviv

- Lead engineer of the Client Infrastructure team: technical planning and cross-team initiatives across roughly ten teams and three products (~10M monthly users).
- Designed the localization platform: translations fetched dynamically, with hotfixes scoped to specific app versions in production (previously a translation fix required a full release), and a CI pipeline that extracts changed strings from each PR and files translator tasks automatically. Translations stopped blocking merges.
- Migrated tens of thousands of UI strings to semantic keys with an LLM service I built: model-suggested names, human approval in a small review UI, changes applied as auto-generated PRs. The code changes themselves took hours.

**Remitly Israel (formerly Rewire)**

Jun 2020 – Dec 2022

SENIOR SOFTWARE ENGINEER

Tel Aviv

- Led the migration of the core product from an AngularJS / React web app to React Native , the company's first mobile-first architecture.
- Designed an XState orchestration engine for financial flows (send money, deposit, re-authentication) with over-the-air business-logic updates: changes reached users without an app release or store review.
- Moved all client CI/CD from GitLab to GitHub Actions , cutting pipeline runtimes roughly in half. The cutover took one weekend; teams started Monday on the new system with nothing missing.

**Wix.com**

Feb 2017 – Nov 2019

SOFTWARE ENGINEER

Be'er Sheva / Tel Aviv

- Tech lead on Wix Forms, the first first-party app built on the Editor platform SDK; its architecture became the reference for the first-party apps that followed.
- Extracted the Editor's user authentication out of the monolith into a standalone module, code that runs under every editor-built site. Still one of my proudest projects.

**Yeger-Lotem Lab, Ben-Gurion University**

Feb 2015 – Feb 2017

FULL-STACK DEVELOPER (PART-TIME)

Be'er Sheva

- Sole engineer for the lab's software: interactive visualization tools for protein-interaction networks ( D3 , Cytoscape.js ) over Python / Flask / Celery APIs.

## { EDUCATION }

BSc, Computer Science & Bioinformatics Ben-Gurion University of the Negev

2013 – 2017

## { PUBLICATIONS }

**TissueNet2: A quantitative view of proteins and their interactions across human tissues**

Nucleic Acids Research

2016

BASHA O, BARSHIR R, SHARON M, LERMAN E, KIRSON B, HEKSELMAN I AND YEGER-LOTEM E

## { SKILLS }

CORE daily driver [ TypeScript, React Native, Node ], at home in [ client infrastructure: release automation, mobile CI, localization ]

NATIVE [ Swift, Kotlin, Objective-C ], enough to write, patch and review native code

AI PRACTICE shipping daily with [ Claude Code, Codex, Cursor ]; writing skills and MCP tooling, keeping agent context lean

LANGUAGES fluent in [ English and Hebrew ], conversant in [ Russian ]
