

{ EUGENE : LERMAN }

Senior Software Engineer

Tel Aviv, Israel · (+972) 52-3535-231 · lerman.gene@gmail.com · github.com/airbugg · linkedin.com/in/lerman-gene · eugenelerman.net

Curious individual, voracious reader, collector of hats: client infrastructure, native and React Native apps, release engineering, and the occasional genuinely hairy onboarding flow. Happiest with small teams, large ownership, and rewrites measured in months.

{ EXPERIENCE }

Rylo AI communication platform for the Deaf and hard-of-hearing · \$100M+ raised

Feb 2026 – Present

Tel Aviv

SOFTWARE ENGINEER

- Part of the five-person crew that rewrote the entire client stack — native iOS (`Swift`), Android (`Kotlin`) and `React Native` — in three months, working spec-first with 3–5 coding agents running implement–review–validate loops in parallel.
- Owned the rebuilt app's onboarding — its hairiest flow — modeled as an `XState` machine until it stopped being hairy.
- Built the platform under the rewrite: a monorepo housing the apps, a design system with automated `Figma` sync, and client CI/CD — all from scratch.
- Re-architected mobile release engineering on my own initiative: an automated release pipeline with a web UI for cutting branches and shipping builds, feeding an internal app-distribution system I built when Firebase's stopped earning its keep.

Remitly Israel (formerly Rewire) cross-border banking & remittances

Dec 2022 – Feb 2026

Tel Aviv

STAFF SOFTWARE ENGINEER · CLIENT INFRASTRUCTURE

- Lead engineer of the Client Infrastructure team: technical planning and cross-team initiatives spanning ~10 teams and three products (~10M MAUs).
- Designed the localization platform: translations delivered dynamically with version-scoped production hotfixes (previously: cut a release), plus a diff-driven CI pipeline that extracts changed strings, files translator tasks, and stops blocking merges.
- Migrated tens of thousands of strings to semantic keys with an AI service I built — model-suggested names, human-approved in a purpose-built UI, applied as auto-generated PRs. Two weeks of talking to product; hours of actual migration.
- Moved all client CI/CD from `GitLab` to `GitHub Actions` across 4–6 teams: runtimes down 50%+, cutover done in a weekend. Monday passed without comment, which was the goal.

Remitly Israel (formerly Rewire)

Jun 2020 – Dec 2022

Tel Aviv

SENIOR SOFTWARE ENGINEER

- Led the migration of the core product from an `AngularJS` / `React` web app to `React Native`, carrying the company into its mobile-first era.
- Designed an `XState`-based orchestration engine modeling financial flows — send money, deposit, re-authentication — with over-the-air business-logic updates: no redeploy, no app-store queue.

Wix.com

Feb 2017 – Nov 2019

Be'er Sheva / Tel Aviv

SOFTWARE ENGINEER

- Frontend architecture and modernization across Contacts, Forms, Editor and Bookings, through the company-wide `AngularJS` → `React` / `MobX` migration.
- Tech lead on Wix Forms: designed the first first-party app on the Editor platform SDK; its patterns became the template for the first-party apps that followed.
- Extracted and externalized the Editor's monolithic authentication — foundational code under every editor-built site, and still one of my proudest pieces of surgery.

Yeger-Lotem Lab, Ben-Gurion University

Feb 2015 – Feb 2017

Be'er Sheva

FULL-STACK DEVELOPER (PART-TIME)

- Sole engineer for the lab's software: open-source visualization tools for protein-interaction networks (`D3`, `Cytoscape.js`) over `Python` / `Flask` / `Celery` APIs.
- Co-author: "TissueNet 2: a quantitative view of protein interactions across human tissues", *Nucleic Acids Research*, 2016.
