

{ EUGENE : LERMAN }

SENIOR SOFTWARE ENGINEER

Tel Aviv, Israel · (+972) 52-3535-231 · lerman.gene@gmail.com · github.com/airbugg · linkedin.com/in/lerman-gene · eugenelerman.net

A curious individual and a voracious reader with a somewhat philosophical approach to software: build the platform well and the product stops being hard. Ten years of client infrastructure, migrations and rewrites that went quietly.

{ EXPERIENCE }

Rylo AI communication platform for the Deaf and hard-of-hearing · \$100M+ raised

Feb 2026 – Present

SOFTWARE ENGINEER

Tel Aviv

- Part of the five-person crew that rewrote the entire client stack — native iOS (Swift), Android (Kotlin) and React Native — in three months, working spec-first with 3–5 coding agents running implement–review–validate loops in parallel.
- Built the platform under the rewrite: a monorepo housing the apps, a design system with automated Figma sync, and client CI/CD — all from scratch.
- Re-architected mobile release engineering on my own initiative: an automated release pipeline with a web UI for cutting branches and shipping builds, feeding an internal app-distribution system I built when Firebase's stopped earning its keep.
- Owned the rebuilt app's onboarding — its hairiest flow — modeled as an XState machine until it stopped being hairy.

Remitly Israel (formerly Rewire) cross-border banking & remittances

Dec 2022 – Feb 2026

STAFF SOFTWARE ENGINEER · CLIENT INFRASTRUCTURE

Tel Aviv

- Lead engineer of the Client Infrastructure team: technical planning and cross-team initiatives spanning ~10 teams and three products (~10M MAUs).
- Designed the localization platform: translations delivered dynamically with version-scoped production hotfixes (previously: cut a release), plus a diff-driven CI pipeline that extracts changed strings, files translator tasks, and stops blocking merges.
- Migrated tens of thousands of strings to semantic keys with an AI service I built — model-suggested names, human-approved in a purpose-built UI, applied as auto-generated PRs. Two weeks of talking to product; hours of actual migration.
- Moved all client CI/CD from GitLab to GitHub Actions across 4–6 teams: runtimes down 50%+, cutover done in a weekend. Monday passed without comment, which was the goal.

Remitly Israel (formerly Rewire)

Jun 2020 – Dec 2022

SENIOR SOFTWARE ENGINEER

Tel Aviv

- Led the migration of the core product from an AngularJS / React web app to React Native, carrying the company into its mobile-first era.
- Designed an XState-based orchestration engine modeling financial flows — send money, deposit, re-authentication — with over-the-air business-logic updates: no redeloys, no app-store queue.

Wix.com

Feb 2017 – Nov 2019

SOFTWARE ENGINEER

Be'er Sheva / Tel Aviv

- Tech lead on Wix Forms: designed the first first-party app on the Editor platform SDK; its patterns became the template for the first-party apps that followed.
- Extracted and externalized the Editor's monolithic authentication — foundational code under every editor-built site, and still one of my proudest pieces of surgery.

Yeger-Lotem Lab, Ben-Gurion University

Feb 2015 – Feb 2017

FULL-STACK DEVELOPER (PART-TIME)

Be'er Sheva

- Co-author: "TissueNet 2: a quantitative view of protein interactions across human tissues", Nucleic Acids Research, 2016.

{ TOOLBOX }

Languages	[TypeScript & JavaScript (native tongue) · Python · Swift, Kotlin, Objective-C (productive; agents cover the accent)]
Client	[React · React Native · Expo / EAS / Nitro · XState · Apollo GraphQL · Tailwind · Reanimated · Svelte]
Infra	[Node · Bun · GitHub Actions · GitLab CI · Terraform · Pulumi · AWS · Kubernetes + Helm]
AI	[Claude Code · Codex · Cursor · multi-agent loops (Ralph, software-factory setups) · MCP & skill authoring · context management that respects the window]

{ EDUCATION }

BSc, Computer Science & Bioinformatics Ben-Gurion University of the Negev

2013 – 2017
