

Eugene Lerman

SENIOR SOFTWARE ENGINEER

Tel Aviv, Israel · (+972) 52-3535-231 · lerman.gene@gmail.com · github.com/airbugg · linkedin.com/in/lerman-gene · eugenelerman.net

Most of my code now ships through agents — specs in, reviewed and validated software out, three to five loops in parallel. I've run every frontier model and every harness worth mentioning, and kept the parts that survived contact with production.

// HOW I WORK

Spec- and prototype-driven, multi-agent by default: Ralph loops and software-factory setups, custom skills for the monotonous parts (simulator testing included), agents for implementation, review and validation. Went through the everything-is-a-skill phase, hit context bloat, came out the other side with a lean, progressively disclosed setup — code as the source of truth. Harness rotation: Claude Code, Codex, Cursor, OpenClaw, Hermes, Argent — whichever model fits the task that week.

// EXPERIENCE

Rylo AI communication platform for the Deaf and hard-of-hearing · \$100M+ raised

Feb 2026 – Present

Software Engineer

Tel Aviv

- Part of the five-person crew that rewrote the entire client stack — native iOS (Swift), Android (Kotlin) and React Native — in three months, working spec-first with 3–5 coding agents running implement–review–validate loops in parallel.
- Put the team's shared agent setup on a diet after noticing every fresh session started 70k tokens in debt: lean, focused skills, progressively disclosed, code as the source of truth.
- Built the platform under the rewrite: a monorepo housing the apps, a design system with automated Figma sync, and client CI/CD — all from scratch.
- Re-architected mobile release engineering on my own initiative: an automated release pipeline with a web UI for cutting branches and shipping builds, feeding an internal app-distribution system I built when Firebase's stopped earning its keep.

Remitly Israel (formerly Rewire) cross-border banking & remittances

Dec 2022 – Feb 2026

Staff Software Engineer · Client Infrastructure

Tel Aviv

- Lead engineer of the Client Infrastructure team: technical planning and cross-team initiatives spanning ~10 teams and three products (~10M MAUs).
- Migrated tens of thousands of strings to semantic keys with an AI service I built — model-suggested names, human-approved in a purpose-built UI, applied as auto-generated PRs. Two weeks of talking to product; hours of actual migration.
- Designed the localization platform: translations delivered dynamically with version-scoped production hotfixes (previously: cut a release), plus a diff-driven CI pipeline that extracts changed strings, files translator tasks, and stops blocking merges.
- Moved all client CI/CD from GitLab to GitHub Actions across 4–6 teams: runtimes down 50%+, cutover done in a weekend. Monday passed without comment, which was the goal.

Remitly Israel (formerly Rewire)

Jun 2020 – Dec 2022

Senior Software Engineer

Tel Aviv

- Led the migration of the core product from an AngularJS/React web app to React Native, carrying the company into its mobile-first era.
- Designed an XState-based orchestration engine modeling financial flows — send money, deposit, re-authentication — with over-the-air business-logic updates: no redeloys, no app-store queue.

Wix.com

Feb 2017 – Nov 2019

Software Engineer

Be'er Sheva / Tel Aviv

- Tech lead on Wix Forms: designed the first first-party app on the Editor platform SDK; its patterns became the template for the first-party apps that followed.
- Extracted and externalized the Editor's monolithic authentication — foundational code under every editor-built site, and still one of my proudest pieces of surgery.

Yeger-Lotem Lab, Ben-Gurion University

Feb 2015 – Feb 2017

Full-stack Developer (part-time)

Be'er Sheva

- Co-author: "TissueNet 2: a quantitative view of protein interactions across human tissues", Nucleic Acids Research, 2016.

// TOOLBOX

Languages TypeScript & JavaScript (native tongue) · Python · Swift, Kotlin, Objective-C (productive; agents cover the accent)
Client React · React Native · Expo / EAS / Nitro Modules · XState · Apollo GraphQL · Tailwind · Reanimated · Svelte · Angular
Infra Node · Bun · GitHub Actions · GitLab CI · Terraform · Pulumi · AWS · Kubernetes + Helm

// EDUCATION

BSc, Computer Science & Bioinformatics Ben-Gurion University of the Negev

2013 – 2017
