

Eugene Lerman

Senior Software Engineer

Tel Aviv, Israel · (+972) 52-3535-231 · lerman.gene@gmail.com · github.com/airbugg · linkedin.com/in/lerman-gene · eugeneleman.net

Senior Software Engineer with 10+ years in client infrastructure, frontend architecture and mobile development. Led CI/CD migrations, localization platforms, a React Native migration, and AI-assisted development workflows for products serving ~10M monthly active users.

PROFESSIONAL EXPERIENCE

Rylo AI communication platform for the Deaf and hard-of-hearing · \$100M+ raised Feb 2026 – Present
Tel Aviv

- Software Engineer**
- Rewrote the client stack (native iOS/Swift, Android/Kotlin, React Native) with a five-person team in three months, using spec-driven, multi-agent AI development workflows.
 - Built the platform under the rewrite: a monorepo housing the apps, a design system with automated Figma sync, and client CI/CD — all from scratch.
 - Re-architected mobile release engineering: automated release pipeline with a web-based management UI and an internal app-distribution system replacing Firebase App Distribution.
 - Owned the rebuilt application's onboarding flow, modeled and simplified with XState state machines.

Remitly Israel (formerly Rewire) cross-border banking & remittances Dec 2022 – Feb 2026
Staff Software Engineer · Client Infrastructure Tel Aviv

- Lead engineer of the Client Infrastructure team: technical planning and cross-team initiatives spanning ~10 teams and three products (~10M MAUs).
- Designed and implemented a localization automation platform: dynamic translation delivery with version-scoped production hotfixes and CI-driven string extraction and translator handoff (i18next).
- Built an AI-assisted migration service converting tens of thousands of translation strings to semantic keys via model suggestions, a review UI, and auto-generated pull requests.
- Migrated all client CI/CD pipelines from GitLab to GitHub Actions across 4–6 teams, cutting pipeline runtimes by over 50% with a zero-disruption weekend cutover.
- Rolled out Apollo GraphQL client infrastructure — generated types plus client links for auth, caching and batching.

Remitly Israel (formerly Rewire) Jun 2020 – Dec 2022
Senior Software Engineer Tel Aviv

- Led the migration of the core product from an AngularJS/React web app to React Native, carrying the company into its mobile-first era.
- Designed an XState-based orchestration engine modeling financial flows — send money, deposit, re-authentication — with over-the-air business-logic updates: no redeloys, no app-store queue.

Wix.com Feb 2017 – Nov 2019
Software Engineer Be'er Sheva / Tel Aviv

- Frontend architecture and modernization across Contacts, Forms, Editor and Bookings, through the company-wide AngularJS → React/MobX migration.
- Tech lead on Wix Forms: designed the first first-party app on the Editor platform SDK; its patterns became the template for the first-party apps that followed.
- Extracted and externalized the Editor's monolithic authentication — foundational code under every editor-built site, and still one of my proudest pieces of surgery.

Yeger-Lotem Lab, Ben-Gurion University Feb 2015 – Feb 2017
Full-stack Developer (part-time) Be'er Sheva

- Sole engineer for the lab's software: open-source visualization tools for protein-interaction networks (D3, Cytoscape.js) over Python/Flask/Celery APIs.
- Co-author: "TissueNet 2: a quantitative view of protein interactions across human tissues", Nucleic Acids Research, 2016.

SKILLS

Languages	TypeScript, JavaScript, Python, Swift, Kotlin, Objective-C, SQL, Bash
Frontend	React, React Native, Expo, EAS, Nitro Modules, XState, Apollo GraphQL, Redux, MobX, Tailwind CSS, Reanimated, Svelte, Angular, i18next
Backend & Infrastructure	Node.js, Bun, GitHub Actions, GitLab CI, Jenkins, Terraform, Pulumi, AWS, Kubernetes, Helm, Docker
AI Tooling	Claude Code, Codex, Cursor, multi-agent workflows, MCP, agent skill authoring, spec-driven development

EDUCATION

BSc, Computer Science & Bioinformatics Ben-Gurion University of the Negev 2013 – 2017
