

EUGENE LERMAN

SENIOR SOFTWARE ENGINEER

Tel Aviv, Israel · (+972) 52-3535-231 · lerman.gene@gmail.com · github.com/airbugg · linkedin.com/in/lerman-gene · eugenelerman.net

TOOLBOX

Languages

TypeScript & JavaScript (native tongue) · Python · Swift, Kotlin, Objective-C (productive; agents cover the accent)

Client

React · React Native · Expo / EAS / Nitro Modules · XState · Apollo GraphQL · Tailwind · Reanimated · Svelte · Angular

Infra

Node · Bun · GitHub Actions · GitLab CI · Terraform · Pulumi · AWS · Kubernetes + Helm

AI

Claude Code · Codex · Cursor · multi-agent loops (Ralph, software-factory setups) · MCP & skill authoring · context management that respects the window

EDUCATION

BSc, Computer Science & Bioinformatics

Ben-Gurion University of the Negev
2013 – 2017

A curious individual and a voracious reader with a somewhat philosophical approach to software: build the platform well and the product stops being hard. Ten years of client infrastructure, migrations and rewrites that went quietly.

EXPERIENCE

Rylo AI communication platform for the Deaf and hard-of-hearing · \$100M+ raised

Feb 2026 – Present

Tel Aviv

Software Engineer

- Part of the five-person crew that rewrote the entire client stack — native iOS (Swift), Android (Kotlin) and React Native — in three months, working spec-first with 3–5 coding agents running implement–review–validate loops in parallel.
- Built the platform under the rewrite: a monorepo housing the apps, a design system with automated Figma sync, and client CI/CD — all from scratch.
- Re-architected mobile release engineering on my own initiative: an automated release pipeline with a web UI for cutting branches and shipping builds, feeding an internal app-distribution system I built when Firebase's stopped earning its keep.
- Owned the rebuilt app's onboarding — its hairiest flow — modeled as an XState machine until it stopped being hairy.

Remitly Israel (formerly Rewire) cross-border banking & remittances

Dec 2022 – Feb 2026

Tel Aviv

Staff Software Engineer · Client Infrastructure

- Lead engineer of the Client Infrastructure team: technical planning and cross-team initiatives spanning ~10 teams and three products (~10M MAUs).
- Designed the localization platform: translations delivered dynamically with version-scoped production hotfixes (previously: cut a release), plus a diff-driven CI pipeline that extracts changed strings, files translator tasks, and stops blocking merges.
- Migrated tens of thousands of strings to semantic keys with an AI service I built — model-suggested names, human-approved in a purpose-built UI, applied as auto-generated PRs. Two weeks of talking to product; hours of actual migration.
- Moved all client CI/CD from GitLab to GitHub Actions across 4–6 teams: runtimes down 50%+, cutover done in a weekend. Monday passed without comment, which was the goal.

Remitly Israel (formerly Rewire)

Jun 2020 – Dec 2022

Tel Aviv

Senior Software Engineer

- Led the migration of the core product from an AngularJS/React web app to React Native, carrying the company into its mobile-first era.
- Designed an XState-based orchestration engine modeling financial flows — send money, deposit, re-authentication — with over-the-air business-logic updates: no redeployes, no app-store queue.

Wix.com

Feb 2017 – Nov 2019

Be'er Sheva / Tel Aviv

Software Engineer

- Tech lead on Wix Forms: designed the first first-party app on the Editor platform SDK; its patterns became the template for the first-party apps that followed.
- Extracted and externalized the Editor's monolithic authentication — foundational code under every editor-built site, and still one of my proudest pieces of surgery.

Yeger-Lotem Lab, Ben-Gurion University

Feb 2015 – Feb 2017

Be'er Sheva

Full-stack Developer (part-time)

- Co-author: "TissueNet 2: a quantitative view of protein interactions across human tissues", Nucleic Acids Research, 2016.
