

{ EUGENE : LERMAN }

SENIOR SOFTWARE ENGINEER

Ramat Gan, Israel · (+972) 52-3535-231 · lerman.gene@gmail.com · github.com/airbugg · linkedin.com/in/lerman-gene

Software engineer, twelve years, most of them on client platforms and infrastructure: build and release systems, CI, localization, the machinery other engineers work on top of.

{ EXPERIENCE }

Rylo AI communication platform for the Deaf and hard-of-hearingFeb 2026 – PresentTel Aviv

SOFTWARE ENGINEER

- One of five engineers on a ground-up rewrite of the company's client apps: native iOS (Swift), Android (Kotlin) and React Native . Shipped in three months, working spec-first with coding agents handling much of the implementation and review in parallel.
- Built the client platform for the rewrite from scratch: the apps monorepo, a design system with automated Figma sync, and all client CI/CD.
- Rebuilt the mobile release process: an automated pipeline with a web UI for cutting release branches and shipping builds, and an in-house app-distribution service that replaced Firebase App Distribution .
- Restructured the team's shared coding-agent setup after measuring ~70k tokens of always-loaded context per session. Replaced it with small, focused skills loaded on demand, with code as the source of truth.

Remitly Israel (formerly Rewire) cross-border banking & remittancesDec 2022 – Feb 2026Tel Aviv

STAFF SOFTWARE ENGINEER · CLIENT INFRASTRUCTURE

- Lead engineer of the Client Infrastructure team: technical planning and cross-team initiatives across roughly ten teams and three products (~10M monthly users).
- Designed the localization platform: translations fetched dynamically, with hotfixes scoped to specific app versions in production (previously a translation fix required a full release), and a CI pipeline that extracts changed strings from each PR and files translator tasks automatically. Translations stopped blocking merges.
- Moved all client CI/CD from GitLab to GitHub Actions , cutting pipeline runtimes roughly in half. The cutover took one weekend; teams started Monday on the new system with nothing missing.
- Migrated tens of thousands of UI strings to semantic keys with an LLM service I built: model-suggested names, human approval in a small review UI, changes applied as auto-generated PRs. The code changes themselves took hours.
- Built the shared Apollo GraphQL client infrastructure: generated types and client links for auth, caching and batching.

Remitly Israel (formerly Rewire)Jun 2020 – Dec 2022Tel Aviv

SENIOR SOFTWARE ENGINEER

- Led the migration of the core product from an AngularJS / React web app to React Native , the company's first mobile-first architecture.
- Designed an XState orchestration engine for financial flows (send money, deposit, re-authentication) with over-the-air business-logic updates: changes reached users without an app release or store review.

Wix.comFeb 2017 – Nov 2019Be'er Sheva / Tel Aviv

SOFTWARE ENGINEER

- Tech lead on Wix Forms, the first first-party app built on the Editor platform SDK; its architecture became the reference for the first-party apps that followed.
- Extracted the Editor's user authentication out of the monolith into a standalone module, code that runs under every editor-built site. Still one of my proudest projects.

Yeger-Lotem Lab, Ben-Gurion UniversityFeb 2015 – Feb 2017Be'er Sheva

FULL-STACK DEVELOPER (PART-TIME)

- Sole engineer for the lab's software: interactive visualization tools for protein-interaction networks (D3 , Cytoscape.js) over Python / Flask / Celery APIs.

{ EDUCATION }

BASHA O, BARSHIR R, SHARON M, LERMAN E, KIRSON B, HEKSELMAN I AND YEGER-LOTEM E

{ SKILLS }

- Core
- daily driver [TypeScript , React Native , Node], at home in [client infrastructure: release automation, mobile CI, localization]
- Native
- [Swift , Kotlin , Objective-C], enough to write, patch and review native code
- AI practice
- shipping daily with [Claude Code , Codex , Cursor]; writing skills and MCP tooling, keeping agent context lean
- Languages
- fluent in [English and Hebrew], conversant in [Russian]
